

**For highest demands. Powerful and flexible.**

High performance steel anchors 4

Balcony railings

Steel girders

### VERSIONS

- Zinc-plated steel
- Stainless steel
- Highly corrosion-resistant steel

### BUILDING MATERIALS

#### Approved for:

- Concrete C20/25 to C50/60, cracked and non-cracked

#### Also suitable for:

- Concrete C12/15
- Concrete C80/95
- Natural stone with dense structure

### CERTIFICATES

### ADVANTAGES

- According to the new assessment (ETA) the tensile load capacities are decisively increased. This requires less anchors.
- The variable anchorage depths for the sizes M8 to M16 allow for the first time a millimeter-accurate adjustment to the loads.
- The design with cap nut offers a visually attractive anchoring and protects against injuries due to the round head shape.
- The first bolt anchor M6 with ETA Assessment for Option 1, for secure and approved anchorage.
- The international approvals guarantees maximum safety and the best performance.
- Approved for diamond-drilled holes.

### APPLICATIONS

- Steel constructions
- Guard rails
- Consoles
- Ladders
- Cable trays
- Machines
- Staircases
- Gates
- Façades
- Timber constructions

### FUNCTIONING

- The FAZ II is suitable for pre-positioned and push-through installation and is also ideal for stand-off installation thanks to the long thread.
- When applying the torque, the cone bolt is pulled into the expansion sleeve and expand it against the drill hole wall.
- The anchor is set in line with the approval once the preset installation torque is achieved.
- In the case of series installation, we recommend using the FABS anchor bolt setting tool.

## DRILL HOLE PREPARATION

## PUSH-THROUGH INSTALLATION WITH HEXAGON NUT

## PUSH-THROUGH INSTALLATION OF THE CUP NUT VERSION WITH SETTING GAUGE

For the design the complete assessment ETA-05/0069, issue date 03.07.2017 has to be considered.<sup>9)</sup>

<sup>1)</sup> The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of  $\gamma_L = 1,4$  are considered. As an single anchor under tension load and shear load without edge influence counts e.g. an anchor with a spacing  $s \geq 3 \cdot h_{ef}$  and an edge distance  $c \geq 1,5 \cdot h_{ef}$ . Concerning shear loads under edge influence and accurate data see ETA.

<sup>2)</sup> For higher concrete strength classes up to C50/60 higher permissible loads may be possible.

<sup>3)</sup> Drill method hammer drilling, hollow drilling resp. Diamond drilling.

<sup>4)</sup> Eff. anchorage depth: min. anchorage depth, max. anchorage depth.

<sup>5)</sup> The anchorage depths smaller than 40 mm are only allowed for single anchors as part of a multiple fixing of non-structural systems.

<sup>6)</sup> For combinations of tensile loads, shear loads, bending moments as well as reduced edge distances or spacings (anchor groups) see ETA.

<sup>7)</sup> Minimum possible axial spacings resp. edge distance while reducing the permissible load.

<sup>8)</sup> The given loads refer to the European Technical Assessment ETA-05/0069, issue date 03.07.2017. Design of the loads according TR055/ETAG 001, Annex C, Method A (for static resp. quasi-static loads).

<sup>9)</sup> A reinforcement in the concrete to prevent splitting is required. The width of the cracks has to be limited under consideration of the splitting forces at  $w_k \sim 0,3\text{mm}$ .

## LOADS

### Bolt anchor FAZ II, FAZ II K and FAZ II GS (HBS)

zinc plated steel / stainless steel / high corrosion resistant steel

Permissible loads of a single anchor in non-cracked normal concrete (concrete compression zone) of strength class C20/25 (~B25) <sup>1) 2) 3)</sup>										Minimum spacings while reducing the load		
Type	Material fixing element	Min. member thickness $h_{min}$ [mm]	Effective anchorage depth $h_{ef}^{4)}$ [mm]	Installation torque $T_{inst}$ [Nm]	Permissible tensile load $N_{perm}^{6)}$ [kN]	Permissible shear load $V_{perm}^{6)}$ [kN]	Required edge distance (with one edge) for		Required spacing for  Max.
